

Persuasive Essay Introduction Examples

1. Requiring More Fuel-Efficient Cars

We live in tough times. Gas prices continue to increase, the economy is falling apart, and some believe that the environment is changing for the worst. All of these problems can be related to two things, the cost of fuel and the inefficient vehicles we drive. Both of these problems can be solved with one solution. This solution could not only help the environment, it could help the economy, and advance technology. We should require that the automobile manufacturers should produce more fuel-efficient vehicles.

2. Learning Another Language

The chief wonder of education is that it does not ruin everybody concerned in it, teachers and taught. This stated in 1901 by a Mr. Henry Brooks Adams (1828-1918) U.S. historian and writer, “The Education of Henry Adams”. When he said these words, he mints that education was out to better one’s life in their way. So it would and is completely unlawful for a second language to be thought outside English and I will show this by speaking primarily on one the limited access to all languages and no preference on which one to acquire, how this would show a bias towards one profession and retract learning for individuals life career and Finally how It discards original intention of public school and search for a education.

3. Fuel Efficiency Is the Key to a Better Life

As the price of gas keeps getting higher and higher, so does the demand of alternative power sources. Though the vehicles we drive now have been good enough for the past 100 years, they are not efficient enough for our needs today. We need to find new ways to create fuel efficient vehicles. Whether it is gasoline, battery, hydrogen, solar, or even wind powered, we must find alternative ways to increase gas mileage. The benefits of increasing gas mileage would be a healthier environment, a boost in the economy, and help for families across the United States. Our current vehicles are not acceptable in any of these categories.

4. The Spectacular's of Sports

In high school, there are many opportunities to become involved in activities throughout the school year. Whether it's a club such as FBLA or a sport in which athletes can compete, students have numerous opportunities to get involved. These opportunities help prepare students for life by teaching them important lessons. Although clubs can teach students some major life skills, they do not teach the students as much as a student actively involved in high school sports. High school athletics teach students valuable life lessons, teach students how to manage what is important in their life, and teach students to remain physically active throughout life. High school sports are an important key to teens becoming successful in life and should not be taken for granted.

5. The Value of Taking Risks and Making Mistakes

Have you ever regretted doing or not doing a certain task? You might regret it because you didn't want to take any risks. In life, majority people take a risk every day. Yes, some make mistakes, but some can usually take that mistake and brush it aside or learn from it. Then others take the risk again without making mistakes the next time. A firm belief is established in a lifestyle in whether or not someone is a risk taker or not. It will usually depend on how well they take to making mistakes. If a person believes they want something bad enough or they care about the situation they are in, they should take that risk to achieve what they want to accomplish, although they may make a mistake.

6. Driving Age in the USA

The driving age in most foreign countries is higher than in the United States, but the USA has more Agriculture than most of the world. This means that it is not just the parents that are doing all the work the kids are helping too. The kids need to start driving at an early age so they can go to school without having their parents driving them in from a far distance. My point of view on the subject of raising the minimum driving age is that if the driving age goes up it will give the kids less experience, it should stay the same but higher the difficulty of the test, and maybe just increase the driving age in some places like the bigger cities.

7. Lessons to Learn

She runs down the court. A bead of sweat rolls down her face. To her, this is the feeling of hard work. Many valuable lessons can be learned through sports that may dramatically help a teenager. Work ethic, responsibility, teamwork, leadership, passion, success, and failure: all of these can be learned through sports and used in various ways throughout the athlete's life.
